

A long journey for a small butterfly

Reading · Lectura en inglés americano (texto informativo): Un largo viaje para una mariposa pequeña

The monarch is an orange and black butterfly. An adult weighs about half a gram, so it is lighter than a paper clip. But every fall, millions of monarchs fly from Canada and the northern United States to central Mexico. Some travel up to 4,800 kilometers, and the journey can take more than two months.

They spend the winter in forests of oyamel fir trees, high in the mountains of Michoacán and the State of Mexico, between 2,400 and 3,600 meters above sea level. They arrive at the beginning of November, at the same time as the Day of the Dead. The butterflies hang from the trees in big groups, very close together, to stay warm. Sometimes the branches bend under their weight!

These butterflies are special. Most adult monarchs live only two to five weeks, but the ones that fly to Mexico can live six to nine months.

In March, they wake up and start flying north. On the way, the females lay eggs on milkweed plants, because milkweed is the only food that monarch caterpillars can eat. The old butterflies die, but their children and grandchildren continue the journey. The monarchs that fly south in fall are the great-grandchildren, or even the great-great-grandchildren, of the ones that flew north in spring.

Scientists have put tags on monarchs to study their journey. The longest flight in a single day by a tagged monarch was more than 420 kilometers. Many of the forests where monarchs spend the winter are part of the Monarch Butterfly Biosphere Reserve, which has been a UNESCO World Heritage Site since 2008. Next fall, a new generation will make the same amazing journey.

A long journey for a small butterfly

Word bank · Vocabulario

journey: viaje

weighs (weigh): pesa (pesar)

paper clip: clip

fall: otoño

oyamel fir trees: oyameles

above sea level: sobre el nivel del mar

to stay warm: para no tener frío

lay eggs: poner huevos

milkweed: algodoncillo

caterpillars: orugas

great-grandchildren: bisnietos

tags: etiquetas de marcaje

1 Read and write T (true) or F (false).

Lee y escribe T (verdadero) o F (falso).

1. A monarch is heavier than a paper clip.
2. Monarch caterpillars can only eat milkweed.
3. The butterflies arrive in Mexico in March.
4. The winter forests are more than 2,000 meters above sea level.

(T) (F)
